

THE POTTERY FROM THE SLINDON PARK EXCAVATIONS 1999-2004

By Gordon Hayden (Study Group For Roman Pottery)

INTRODUCTION AND SUMMARY

This report encompasses the five seasons of excavation undertaken at Slindon Park, firstly by students from the University of Southampton (1999) and the subsequent work undertaken by Worthing Archaeological Society (2000-2004). The aim of this report is to establish a likely chronological range and provenance for the recovered pottery, and to see whether this would add to an understanding of the supply and use of pottery at the site.

The excavations yielded 13280 sherds (weighing 97305 grams) of pottery, most of which is dateable to the Roman period; however there is also a small amount of pottery of Iron Age, medieval and post-medieval date. The assemblage consists of material from 130 contexts, some of which indicate that the secure stratification of deposits had been compromised in antiquity. Yet, the overall impression is one of deposition of discarded pottery from a period *c.* AD 60/70 continuing to the late-4th century AD (with a highpoint during the 3rd and 4th centuries) with little evidence of subsequent occupation.

METHODOLOGY

All of the pottery was counted and weighed and then quantified by number and weight of sherds per fabric. Rims were measured using a rim chart to determine Estimated Vessel Equivalents (EVE's) and to ascertain vessel forms wherever this was achievable. The colour values of the fabrics have been described using *Munsell Soil Color Charts* (Munsell 2000). Sherds were examined using a hand lens at X20 magnification, whilst a pocket microscope (at X60 magnification incorporating a built-in artificial illumination source) was used to ascertain the size, form, frequency and nature of inclusions and also to determine a fabric type-series. Codes were assigned to each fabric and, where applicable, pre-existing fabric codes have also been cited which can be found in *The National Roman Fabric Reference Collection* (Tomber & Dore 1998).

As part of this report pottery previous unpublished work has been re-assessed. This focused in the main on material from the Rowland's Castle industry found at Slindon during the 1999 (Nelson 2002) and 2000 (Nelson 2003) excavations. This work included the use of thin section analysis. The conclusions from this previous work have been, in the main, corroborated by the findings in this report. The Rowland's Castle industry has recently been published (Dicks 2009) and the fabric codes used therein have been cited in the fabric series below. No thin sectioning was undertaken as part of this report as most sherds of adequate size could be identified using the methods stated above.

THE FABRICS

1) Roman-Period Amphorae

Fabric A1A: Baetican (Early) Amphorae 1

A wheel-finished hard, coarse fabric with a laminated fracture and rough feel. The surface colour varies from light brown (7.5YR 6/3) to light yellowish brown (10YR 6/4), with a light brown (7.5YR 6/4) to pinkish grey (7.5YR 7/2) core. Inclusions consist of common, poorly-sorted, sub-angular quartz, feldspar and mica particles, and sparse sub-angular limestone particles, all ranging from 0.2-0.8mm in size (Tomber & Dore 1998: 84; fabric code: BAT AM 1). No diagnostic sherds exist, but the thickness of some examples indicates that they are likely to have emanated from the Dressel 20 type which contained olive oil. The major period of export to Britain is from the Claudian period to c. AD 260 (Tyers 1996: 87).

Fabric A1B: Baetican (Late) Amphorae 2

A wheel-finished hard, coarse fabric with a smooth fracture and rough feel, the colour of which varies from light brown (7.5YR 6/3) to brownish yellow (10YR 6/6) throughout. Inclusions consist of common, poorly-sorted, sub-angular quartz particles of 0.2-1.0mm in size, sparse angular feldspar and mica particles, and rare sub-angular limestone particles, all ranging from 0.1-0.5mm (Tomber & Dore 1998: 85; fabric code: BAT AM 2). Again most likely to have carried olive oil, the major period of export to Britain is from the 1st century AD to c. AD 260 (Tyers 1996: 87).

Fabric A2: Cadiz Amphorae

A wheel-finished hard, coarse fabric with an irregular fracture and rough feel, which is coloured reddish yellow (7.5YR 7/6) throughout. Inclusions consist of sparse, poorly-sorted, sub-rounded oxidised ferrous particles up to 1.0mm in size, and sub-angular quartz, feldspar and mica particles, all ranging from 0.1-0.5mm (Tomber & Dore 1998: 87; fabric code: CAD AM). The contents of amphorae made in this type of fabric were fish products and the major period of export to Britain is from the Claudian period to the early-2nd century AD (Tyers 1996: 99).

Fabric A3: Italian (Feldspathic) Amphorae 2

A wheel-finished very hard, coarse fabric with an irregular fracture and rough feel, the colour of which varies from light reddish brown (2.5YR 6/4) to light brown (7.5YR 6/4) throughout. Inclusions consist of common, poorly-sorted, angular feldspar particles of 0.2-0.5mm in size, sparse sub-angular quartz and mica particles of 0.1-0.3mm, and rare angular limestone particles up to 0.5mm (Tomber & Dore 1998: 98; fabric code: ITA AM 2). The principal content of amphorae made in this type of fabric was wine and the major period of export to Britain is from the Claudian period to the mid-2nd century AD (Peacock & Williams 1986: 106).

2) Roman-Period Coarseware

Fabric C1A: Rowland's Castle Reduced Coarseware 1

A wheel-thrown hard, rough fabric with a hackly fracture and rough feel. The surface colour varies from grey (10YR 5/1) to grey (2.5Y 6/1), with a grey (10YR 6/1) to light grey (2.5Y 7/1) core. Also present are a number of examples which exhibit an oxidised surface coloured yellowish red (5YR 5/8). Inclusions consist of abundant, well-sorted, sub-rounded quartz particles between 0.1-0.4mm in size with common, sub-rounded ferrous particles of 0.2-0.8mm. Also present are sparse angular mica particles up to 0.2mm and (on some examples) rare sub-angular flint up to 0.5mm. The major period of production of this fabric dates from the mid-1st century to the end of the 3rd century AD (Dicks 2009: 55 & 65; fabric code: B).

Fabric C1B: Rowland's Castle Reduced Coarseware 2

A wheel-thrown hard, rough fabric with an irregular fracture and harsh feel. The surface colour varies greatly from dark brown (7.5YR 3/2) to grey (2.5Y 6/1), with a light brownish grey (10YR 6/2) to light grey (2.5Y 7/1) core. Many examples found in the assemblage exhibit a red (10R 5/6) to red (2.5YR 5/8) colour wash on both the outer and inner surfaces. Also present are a number of examples which exhibit an oxidised surface coloured red (2.5YR 5/8). Inclusions consist of abundant, well-sorted, sub-angular quartz particles up to 1.0mm in size with common, sub-rounded ferrous particles also up to 1.0mm. Also present are sparse sub-angular calcined flint particles up to 1.5mm. This appears to be a slightly coarser variety of the fabric described above. The major period of production of this fabric dates from the mid-1st century to the end of the 3rd century AD (Dicks 2009: 55 & 65; fabric code: A).

Fabric C1C: Rowland's Castle Reduced Coarseware 3

A hand-made, sometimes wheel-finished hard, rough fabric with an irregular fracture and rough feel. The surface colour varies from greyish brown (10YR 5/2) to grey (2.5Y 6/1), with a grey (10YR 6/1) to light grey (2.5Y 7/2) core. Inclusions consist of abundant, well-sorted, sub-rounded quartz between 0.1-0.4mm in size with common, sub-angular flint particles up to 3.0mm and sub-rounded ferrous particles up to 0.5mm. Production is from the Late Iron Age to the late-3rd century AD (Dicks 2009: 55 & 65; fabric code: C).

Fabric C2A: Arun Valley Reduced Coarseware 1

A wheel-thrown hard, rough fabric with an irregular fracture and rough feel; although one specific vessel appears to be hand-made and subsequently wheel-finished. The surface colour varies from dark greyish brown (10YR 4/2) to grey (10YR 5/1) with a grey (10YR 6/1) to light grey (10YR 7/2) core. Inclusions consist of abundant, well-sorted, sub-angular quartz particles between 0.3-1.0mm in size, common sub-rounded ferrous particles up to 0.5mm, rare angular mica particles of 0.1mm, and sub-angular particles of 0.3mm which are possibly glauconitic. The major period of production dates from the mid-1st century to the latter part of the 2nd century AD (Lyne 2005: 105-106).

Fabric C2B: Arun Valley Reduced Coarseware 2

A wheel-thrown hard, rough fabric with an irregular fracture and smooth feel which is present in two varieties and appears to be a finer version of the fabric described above. The first is coloured greyish brown (10YR 5/2) on the surface with a light grey (10YR 7/2) core and reddish yellow (5YR 6/6) margins, whilst the second is coloured grey (10YR 6/1) throughout. Inclusions in both varieties consist of common, well-sorted, sub-rounded quartz particles up to 0.2mm in size, sub-rounded ferrous particles up to 0.3mm, rare angular mica particles of 0.1mm, and sub-rounded particles of 0.3mm which are possibly glauconitic. The major period of production dates from the mid-1st century to the latter part of the 2nd century AD (Lyne 2005: 105-106).

Fabric C3A: Alice Holt/Farnham Reduced Coarseware 1

A wheel-thrown very hard, rough fabric with a hackly fracture and harsh feel. The surface colour varies from grey (7.5YR 5/1) to grey (2.5Y 5/1), with a core varying from grey (7.5YR 6/1) to grey (2.5Y 6/1). A number of examples exhibit a white (10YR 8/1) colour coat on the surface. Inclusions consist of abundant, well-sorted, sub-rounded quartz of 0.2-0.3mm in size, sparse sub-angular mica particles of 0.1-0.2mm, and rare sub-rounded clay pellets of 0.3-0.5mm (Tomber & Dore 1998: 138; fabric code ALH RE). The major period of production is from c. AD 270 until the later-4th century AD (Tyers 1996: 180).

Fabric C3B: Alice Holt/Farnham Reduced Coarseware 2

A wheel-thrown hard, rough fabric with an irregular fracture and harsh feel, which appears to be a finer version of the fabric described above. The colour of the fabric varies from grey (10YR 5/1) to grey (2.5Y 5/1) throughout. Many examples exhibit a very pale brown (10YR 8/4) thick colour coat on the outer surface. Inclusions consist of common, well-sorted, sub-rounded quartz of 0.1-0.2mm in size, sparse sub-angular mica particles of up to 0.1mm (Tomber & Dore 1998: 138; fabric code ALH RE). The major period of production is again from c. AD 270 until the later-4th century AD (Tyers 1996: 180).

Fabric C4: Overwey (Portchester D) Coarseware

A wheel-thrown hard, rough fabric with a hackly fracture and harsh feel, which is coloured either reddish yellow (5YR 7/6) or (more commonly) very pale brown (10YR 8/4) throughout; although some examples exhibit a light brownish grey (10YR 6/2) core. The fabric is frequently (but not always) rilled on the outer surface. Inclusions consist of abundant, well-sorted, sub-rounded quartz and common, sub-rounded ferrous particles of 0.2-0.5mm in size, and sparse angular mica particles of 0.1-0.2mm (Tomber & Dore 1998: 146; fabric code OVW WH). The major period of production is throughout the 4th century AD (Tyers 1996: 194).

Fabric C5: South-East Dorset Black-Burnished Ware 1 (BB1)

A hand-made hard, rough fabric with a hackly fracture, burnished smooth on all surfaces. The surface colour varies from black (7.5YR 2.5/1) to very dark grey (5YR 3/1), with a core varying from very dark grey (7.5YR 3/1) to grey (5YR 6/1), and reddish brown (5YR 4/3) or red (2.5YR 5/8) coloured margins are sometimes present. This variance is most likely due to inconsistent firing conditions. Inclusions consist of abundant, well-sorted, sub-rounded quartz of 0.2-0.5mm in size, and sparse sub-angular shale particles varying from 0.3-0.5mm (Tomber & Dore 1998: 127; fabric code: DOR BB 1). BB1 most commonly occurs on sites from the 2nd to 4th centuries AD (Williams 1977: 163).

Fabric C6A: Late Roman Grog-Tempered Ware 1

A hand-made soft to hard, rough fabric with a hackly fracture and soapy feel. The outer surface is coloured yellowish red (5YR 5/6), with a very dark grey (10YR 3/1) inner surface and a dark reddish brown (5YR 3/2) or grey (5Y 5/1) core. Inclusions consist of abundant, poorly-sorted, sub-angular and sub-rounded grog particles of 1.0-3.0mm in size, sparse sub-angular quartz of 0.2-0.5mm and sub-angular mica particles of 0.1-0.2mm, and sparse sub-rounded and elongated voids. Although the precise source of this fabric is unknown its distribution probably indicates a source somewhere in Hampshire (Tomber & Dore 1998: 139; fabric code HAM GT). The major period of production is from the later-3rd century continuing into the early-5th century AD (Tyers 1996: 192).

Fabric C6B: Late Roman Grog-Tempered Ware 2

A hand-made hard, rough fabric with an irregular fracture and soapy feel. The outer surface is coloured reddish brown (5YR 5/4) or very dark grey (5YR 3/1), with a very dark grey (5YR 3/1) inner surface, and a grey (2.5Y 5/1) or dark reddish brown (5YR 3/2) core. Inclusions consist of abundant, poorly-sorted, sub-angular and sub-rounded grog of 1.0-3.0mm in size, sparse sub-angular quartz of 0.2-0.3mm and sparse sub-angular voids. This fabric differs sufficiently from that described above to suggest it might come from either another production site or that specific vessels were being made using specific clay mixes. On the basis of this, a source somewhere in Hampshire (Tomber & Dore 1998: 139; fabric code HAM GT) can only be tentatively assigned. The major period of production of Grog-Tempered Ware is from the later-3rd century continuing into the early-5th century AD (Tyers 1996: 192).

Fabric C7: New Forest (Coarse) Parchment Ware

A wheel-thrown very hard, rough fabric with a hackly fracture and harsh feel, which is coloured very pale brown (10YR 8/2) throughout. Inclusions consist of abundant, well-sorted, sub-angular quartz and sub-rounded ferrous particles of 0.2-0.5mm in size (Tomber & Dore 1998: 142; fabric code NFO PA). Mortaria also appear in this fabric, differing only in that they contain trituration grits composed of abundant, multi-coloured, angular flint of up to 3.0mm in size. The major period of production is *c.* AD 260-370 (Tyers 1996: 125).

Fabric C8: Miscellaneous Reduced Coarsewares

A dump category consisting of wheel-thrown hard, rough fabrics all with an irregular fracture and a rough feel. The surface colour varies from grey (7.5YR 5/1) to black (10YR 2/1), with cores varying from light grey (7.5YR 7/1) to greyish brown (10YR 5/2). Some examples exhibit reddish brown (2.5YR 5/4) margins. Inclusions consist of common to abundant, well-sorted, sub-angular quartz up to 0.4mm in size, and sparse sub-rounded ferrous particles up to 0.2mm. Also present are sparse to rare sub-angular flint particles, sub-rounded clay pellets, sub-angular mica and on one example rare shell, but not enough to suggest that these would be diagnostic characteristics. No provenance

could be ascertained; although the range of inclusions cannot rule out a local source for most (if not all) of this category.

Fabric C9: Miscellaneous Oxidised Coarsewares

A dump category consisting of wheel-thrown hard, rough fabrics all with an irregular fracture and a rough to smooth feel. The surface colour varies from red (2.5YR 5/8) to reddish yellow (7.5YR 7/6), with a core of similar colour variance; although some examples exhibit a light brown (7.5YR 6/4) core. Inclusions consist of common to abundant, well-sorted, sub-angular quartz of 0.2-0.4mm in size, and sparse sub-rounded ferrous particles up to 0.2mm. No provenance could be ascertained, and the lack of adequate size and abraded nature of much of this category means it is difficult to ascertain whether some fragments are indeed pottery or ceramic building material.

3) Roman-Period Fineware

Fabric F1: South Gaulish (La Graufesenque) Samian

A wheel-thrown, hard and fine fabric with a smooth fracture and feel. The surface has a slip varying in colour from red (10R 4/8) to red (2.5YR 5/8), whilst the core varies from red (10R 4/6) to light red (10R 6/8). The fabric consists of abundant, well-sorted, sub-rounded limestone inclusions 0.1-0.3mm in size and sparse, elongated voids up to 2.0mm (Tomber & Dore 1998: 28; fabric code LGF SA). The major period of export to Britain is between the Claudian and Trajanic periods (Tyers 1996: 112).

Fabric F2A: Central Gaulish (Lezoux) Samian

A wheel-thrown, hard and fine fabric with a conchoidal fracture and smooth feel. The surface has a slip varying in colour from red (10R 5/8) to red (2.5YR 5/8), whilst the core varies from red (10R 5/6) to light red (10R 6/8). The fabric consists of common, moderately-sorted, angular mica, and sparse, sub-rounded limestone and ferrous inclusions all between 0.1-0.3mm in size (Tomber & Dore 1998: 32; fabric code LEZ SA 2). The major period of export to Britain is between c. AD 120 and the end of the 2nd century AD (Tyers 1996: 113).

Fabric F2B: Central Gaulish (Les Martres-de-Veyre) Samian

A wheel-thrown, hard and fine fabric with a conchoidal fracture and smooth feel. The surface has a slip varying in colour from red (10R 5/8) to red (2.5YR 4/6), whilst the core varies from light red (10R 6/6) to light red (10R 6/8). The fabric consists of common, well-sorted, sub-rounded limestone inclusions 0.1-0.3mm in size and sparse, angular mica of 0.1mm and elongated voids of 2.0-3.0mm (Tomber & Dore 1998: 30; fabric code LMV SA). The major period of export to Britain is *c.* AD 100-125 (Tyers 1996: 113).

Fabric F3: East Gaulish Samian

A wheel-thrown, hard and fine fabric with a fracture that varies from conchoidal to smooth, but with a smooth feel. The surface has a slip varying in colour from red (10R 4/6) to red (2.5YR 4/8), whilst the core varies from light red (10R 6/6) to light red (2.5YR 6/8). The fabric consists of sparse to common, well-sorted, sub-rounded limestone and ferrous inclusions of 0.1-0.2mm in size. The variance in fabric is likely to indicate more than one production source in East Gaul. The major period of export to Britain is *c.* AD 120-260 (Tyers 1996: 114).

Fabric F4: Lower Rhineland (Cologne) Colour-Coated Ware

A wheel-thrown, hard and fine fabric with a smooth fracture and feel. The surface has a slip varying in colour from black (10YR 2/1) to dark brown (7.5YR 3/2), whilst the core varies from white (10YR 8/1) to very pale brown (10YR 8/2). The fabric consists of sparse, well-sorted, sub-rounded quartz and ferrous inclusions of up to 0.1mm in size (Tomber & Dore 1998: 57; fabric code KOL CC). The major period of export to Britain is from the Flavian period until the mid-3rd century AD (Tyers 1996: 148).

Fabric F5: Central Gaulish Black-Slipped Ware

A wheel-thrown, hard and fine fabric with a smooth fracture and feel. The surface has a slip varying in colour from black (10YR 2/1) to very dark brown (10YR 2/2), whilst the core varies from yellowish red (5YR 5/8) to red (2.5YR 5/8). The fabric consists of common, well-sorted, sub-rounded limestone with sparser, sub-angular mica and ferrous inclusions, all of up to 0.2mm in size (Tomber & Dore 1998: 50; fabric code CNG BS).

The major period of export to Britain is from c. AD 150 until the early-3rd century AD (Tyers 1996: 138).

Fabric F6: Trier Black-Slipped (Moselkeramik) Ware

A wheel-thrown, hard and fine fabric with a conchoidal fracture and smooth feel. The surface has a slip varying in colour from black (5YR 2.5/1) to dark reddish brown (5YR 2.5/2), whilst the core varies from red (2.5YR 5/6) to red (2.5YR 5/8) with reddish grey (2.5YR 6/1) margins. The fabric consists of common, well-sorted, sub-rounded limestone with sparser, sub-angular ferrous inclusions, both up to 0.2mm in size (Tomber & Dore 1998: 60; fabric code MOS BS). The major period of export to Britain is c. AD 180-250 (Tyers 1996: 138).

Fabric F7: North Gaulish White Ware

A wheel-thrown, hard and fine fabric with an irregular fracture and powdery feel, which is coloured very pale brown (10YR 8/4) throughout. The fabric consists of common, well-sorted, sub-angular quartz of 0.2mm in size with sparser, sub-angular mica and oxidised ferrous inclusions, both up to 0.2mm (Tomber & Dore 1998: 75; fabric code NOG WH 4). The major period of export to Britain is from the Flavian period until the early-2nd century AD (Davies *et al* 1994: 63).

Fabric F8: Colchester Colour-Coated Ware

A wheel-thrown, hard and fine fabric with a smooth fracture and feel. The surface has a slip which is black (5YR 2.5/1) in colour, whilst the core is red (2.5YR 5/8). The fabric consists of abundant, well-sorted, sub-rounded quartz and limestone, and sub-angular ferrous inclusions, all 0.1mm in size (Tomber & Dore 1998: 132; fabric code COL CC 2). The major period of production is from c. AD 120 until the late-3rd century AD (Tyers 1996: 167).

Fabric F9: Lower Nene Valley Colour-Coated Ware

A wheel-thrown, hard and fine fabric with a smooth fracture and feel. The surface has a slip varying in colour from black (7.5YR 2.5/1) to very dark grey (10YR 3/1), whilst the

core varies from light red (2.5YR 6/8) to reddish grey (2.5YR 6/1) sometimes with pinkish white (7.5YR 8/2) margins. The fabric consists of abundant, well-sorted, sub-rounded quartz and limestone, and sub-angular ferrous inclusions, all 0.1mm in size (Tomber & Dore 1998: 118; fabric code LNV CC). The major period of production is from the mid-2nd century until the late-4th century AD (Tyers 1996: 173).

Fabric F10A: Oxfordshire Red/Brown-Slipped Ware

A wheel-thrown, hard and fine fabric with a fracture that varies from conchoidal to smooth, but with a smooth feel. The surface has a slip varying in colour from red (10R 5/8) to red (10R 4/8), whilst the core varies from red (2.5YR 4/6) to light red (2.5YR 6/8); although a reddish grey (2.5YR 6/1) core appears on some examples. The fabric consists of common, well-sorted, angular mica and sub-angular quartz and ferrous inclusions, all up to 0.2mm in size. Some examples have sparse, sub-angular chalk inclusions also up to 0.2mm (Tomber & Dore 1998: 176; fabric code OXF RS). Mortaria also appear in this fabric, differing only in that they contain trituration grits composed of abundant, multi-coloured, sub-angular quartz of 0.5-2.0mm. The major period of production is c. AD 240-400 (Tyers 1996: 178).

Fabric F10B: Oxfordshire White Ware

A wheel-thrown, hard and fine fabric with a smooth fracture and feel, which is coloured either white (10YR 8/1) or very pale brown (10YR 8/2) throughout. The fabric consists of common, well-sorted, sub-angular quartz and ferrous inclusions up to 0.2mm in size, and rare, angular mica up to 0.1mm (Tomber & Dore 1998: 174-175; fabric code OXF WH). Most sherds recovered appear to emanate from mortaria, differing only in that they contain trituration grits composed of abundant, multi-coloured, sub-angular quartz of 0.5-3.0mm. The major period of production is c. AD 100-400 (Tyers 1996: 129).

Fabric F11A: New Forest Metallic-Slipped Ware

A wheel-thrown, very hard and fine fabric with a fracture that varies from conchoidal to smooth, but with a smooth feel. The surface has a slip varying in colour from dark reddish grey (10R 4/1) to dusky red (10R 3/3) with one example red (10R 5/6), whilst the

core varies from reddish grey (10R 6/1) to grey (10YR 6/1). The fabric consists of common, well-sorted, sub-angular quartz and ferrous inclusions, both up to 0.2mm in size (Tomber & Dore 1998: 141; fabric code NFO CC). The major period of production is *c.* AD 260-370 (Tyers 1996: 173).

Fabric F11B: New Forest Red-Slipped Ware

A wheel-thrown, hard and fine fabric with a smooth fracture, but with a feel that varies from smooth to powdery. The surface has a slip varying in colour from brown (7.5YR 4/2) to strong brown (7.5YR 5/6), whilst the core varies from pinkish white (7.5YR 8/2) to very pale brown (10YR 8/4). The fabric consists of common, well-sorted, sub-angular quartz and ferrous inclusions 0.1-0.3mm in size (Tomber & Dore 1998: 144; fabric code NFO RS 2). The major period of production is *c.* AD 260-370 (Tyers 1996: 173).

Fabric F12A: Arun Valley (Hardham) London Ware

A wheel-thrown, hard and fine fabric with a smooth fracture and feel. The surface has a slip varying in colour from black (10YR 2/1) to very dark grey (10YR 3/1), whilst the core varies from dark grey (10YR 4/1) to grey (10YR 5/1), sometimes with brown (10YR 5/3) margins. The fabric consists of abundant, well-sorted, sub-angular mica inclusions and common, sub-rounded quartz and ferrous inclusions, all up to 0.2mm in size. The major period of production is *c.* AD 70-130 (Lyne 1995: 161).

Fabric F12B: Arun Valley (Hardham) Reduced Fineware

A wheel-thrown, hard and fine fabric with a smooth fracture and feel, which is coloured grey (10YR 5/1) throughout. The fabric consists of common, well-sorted, sub-angular mica and ferrous inclusions, and sparse sub-rounded quartz all up to 0.1mm in size. The major period of production is from the mid-1st century until the mid-2nd century AD (Lyne 2005: 105-106).

Fabric F12C: Arun Valley (Hardham/Wiggonholt) Oxidised Fineware

A wheel-thrown, hard and fine fabric with a smooth fracture and feel, which is coloured reddish yellow (5YR 6/8) throughout. The fabric consists of common, well-sorted, sub-

angular mica and oxidised ferrous inclusions, and sparse sub-rounded quartz all up to 0.1mm in size. The major period of production is from the mid-1st century until the mid-2nd century AD (Lyne 2005: 105-106).

Fabric F13: Miscellaneous Colour-Coated Wares

A dump category consisting of wheel-thrown, hard and fine fabrics all with a smooth fracture and feel. The surfaces have slips varying in colour from dark reddish grey (10R 3/1) to dusky red (10R 3/4), whilst cores vary from very pale brown (10YR 7/4) to light yellowish-brown (10YR 6/4). Fabrics consist of sparse, well-sorted, sub-rounded quartz and ferrous inclusions up to 0.1mm in size. A small number of sherds contain very rare sub-angular mica particles, but not enough to suggest that this would be a diagnostic characteristic. No provenance could be ascertained.

Fabric F14A: Miscellaneous Oxidised Finewares 1

A wheel-thrown, hard and fine fabric with an irregular fracture and a smooth feel, which is coloured yellowish red (5YR 5/6) throughout. The fabric consists of sparse, poorly-sorted, sub-angular quartz and oxidised ferrous inclusions of 0.1-0.2mm in size. Differing wall thicknesses indicate more than one vessel. No provenance could be ascertained; although the range of inclusions may indicate a local source.

Fabric F14B: Miscellaneous Oxidised Finewares 2

A wheel-thrown, hard and fine fabric with a smooth fracture and feel, which is coloured reddish yellow (5YR 6/6) throughout. The fabric consists of common, well-sorted, sub-angular quartz inclusions of 0.1-0.5mm in size, and sparse sub-angular ferrous and mica particles up to 0.1mm. Differing wall thicknesses indicate more than one vessel. No provenance could be ascertained; although the range of inclusions may indicate a local source.

Fabric F14C: Miscellaneous Oxidised Finewares 3

A wheel-thrown, hard and fine fabric with a smooth fracture and feel, which is coloured light red (2.5YR 6/8) throughout. The fabric consists of common, well-sorted, angular

mica and sub-angular ferrous inclusions up to 0.1mm in size. Differing wall thicknesses indicate more than one vessel. Although resembling Oxfordshire Red/Brown-Slipped Ware (see above), there was no indication of slip and all examples lack the quartz present in Oxfordshire pottery; therefore exact provenance could not be ascertained.

Fabric F14D: Miscellaneous Oxidised Finewares 4

A wheel-thrown, hard and fine fabric with an irregular fracture and smooth feel, which is coloured red (10R 5/8) to reddish brown (5YR 4/4) throughout; although one example has a reddish grey (2.5YR 5/1) core. The fabric consists of common, well-sorted, sub-angular quartz inclusions up to 0.5mm in size, and sparser sub-angular ferrous and mica particles up to 0.1mm. Differing wall thicknesses indicate more than one vessel. No provenance could be ascertained; although the range of inclusions may indicate a local source imitating Oxfordshire Red/Brown-Slipped Ware (see above).

Fabric F15: Miscellaneous Reduced Fine Micaceous Ware

A wheel-thrown, hard and fine fabric with a smooth fracture and feel, which is coloured grey (10YR 6/1) on the surface with a light grey (10YR 7/1) core. The fabric consists of common, well-sorted, sub-angular mica and ferrous inclusions up to 0.1mm in size. No provenance could be ascertained; although the range of inclusions may indicate a local source.

Fabric F16: Miscellaneous Oxidised Fine Micaceous Ware

A wheel-thrown, hard and fine fabric with a smooth fracture and feel, which is coloured very pale brown (10YR 7/4) on the outer surface with a reddish yellow (5YR 6/6) inner surface and core. The fabric consists of common, well-sorted, sub-angular mica and oxidised and non-oxidised ferrous inclusions up to 0.1mm in size, and sparse sub-angular quartz inclusions up to 0.2mm. No provenance could be ascertained.

Fabric F17: Miscellaneous Reduced Fineware

A wheel-thrown, hard and fine fabric with a smooth fracture and feel, which is coloured reddish brown (5YR 5/4) on the outer surface with a grey (10YR 5/1) inner surface and

core. The fabric consists of sparse, well-sorted, sub-angular quartz, mica and ferrous inclusions up to 0.1mm in size. No provenance could be ascertained; although the range of inclusions may indicate a local source.

Fabric F18: Miscellaneous White Ware

A wheel-thrown, hard and fine fabric with a smooth fracture and powdery feel, which is coloured very pale brown (10YR 8/4) throughout. The fabric consists of common, well-sorted, sub-angular quartz inclusions up to 0.3mm in size, sub-angular oxidised and non-oxidised ferrous inclusions up to 0.2mm, and sparse sub-angular mica particles of 0.1mm. No provenance could be ascertained.

4) Roman-Period Mortaria

Fabric C7: New Forest (Coarse) Parchment Ware

This fabric has been described in the coarseware section as vessels other than mortaria appear in this category (see above).

Fabric F10A: Oxfordshire Red/Brown-Slipped Ware

This fabric has been described in the fineware section as vessels other than mortaria appear in this category (see above).

Fabric F10B: Oxfordshire White Ware

This fabric has been described in the fineware section as at least one vessel other than mortaria appears in this category (see above).

Fabric M1: Rhineland White Ware

A wheel-thrown, hard and coarse fabric with an irregular fracture and harsh feel, which is coloured very pale brown (10YR 7/4) on the surface with a light red (10R 6/6) core. Inclusions consist of abundant, moderately-sorted, sub-angular quartz particles of 0.2-0.5mm in size, sparse sub-angular oxidised and non-oxidised ferrous and rare angular calcareous particles, all ranging from 0.2-1.5mm (Tomber & Dore 1998: 78; fabric code:

RHL WH). No trituration grits survive on the only example found in the assemblage. The major period of export to Britain is *c.* AD 150-220 (Tyers 1996: 131).

Fabric M2: Wiggonholt White Ware

A wheel-thrown, hard and coarse fabric with a hackly fracture and rough feel, which is coloured very pale brown (10YR 8/4) on the surface with a light grey (2.5Y 7/2) core. Inclusions consist of abundant, well-sorted, sub-angular quartz particles of 0.2-0.4mm in size, and common sub-angular ferrous and sparse angular mica particles ranging from 0.1-0.3mm (Tomber & Dore 1998: 187; fabric code: WIG WH). No trituration grits survive on the only example recognised in the assemblage.

Fabric M3: Hampshire White Ware

A wheel-thrown, hard and coarse fabric with a hackly fracture and rough feel, which is coloured yellow (10YR 7/6) on the surface with a light brownish grey (10YR 6/2) core. Inclusions consist of common, well-sorted, sub-rounded quartz and sparser sub-angular ferrous particles, and rare sub-rounded clay pellets, all ranging from 0.1-0.5mm in size. The trituration grits are composed of angular flint, sub-angular quartz and sub-rounded clay pellets measuring 2.0-5.5mm (Tomber & Dore 1998: 140; fabric code: HAM WH).

5) Prehistoric and Post-Roman Fabrics

Fabric IA1: Iron Age Flint-Tempered Ware

A hand-made hard, rough fabric with an irregular fracture and soapy feel, which is coloured dark brown (7.5YR 3/2) on the surface with a brown (7.5YR 4/3) core. Inclusions consist of common, poorly-sorted, sub-angular flint particles up to 0.5mm in size, and sparse sub-angular quartz and ferrous particles up to 0.1mm. No provenance could be ascertained; although the range of inclusions may indicate a local source.

Fabric MED1: Medieval Glazed Ware

A wheel-thrown hard, rough fabric with a hackly fracture and rough feel. The inner surface is coloured with a reddish brown (2.5YR 5/3) glaze, whilst the core is very pale brown (10YR 7/4). The outer surface on the single example found in this assemblage is

missing. Inclusions consist of sparse, moderately-sorted, sub-angular oxidised and non-oxidised ferrous particles of 0.5mm in size, and rare, sub-rounded quartz and sub-angular mica particles up to 0.2mm. No provenance could be ascertained.

Fabric MED2: Medieval Sandy Ware

A wheel-thrown hard, harsh fabric with an irregular fracture and rough feel on the break, which is coloured light reddish brown (2.5YR 6/4) throughout. Inclusions consist of common, well-sorted, sub-angular quartz and ferrous particles up to 0.5mm in size, and sub-angular mica particles up to 0.1mm. No provenance could be ascertained.

Fabric PM1: Post-Medieval Fine White Ware

A wheel-thrown hard, slightly rough fabric with a hackly fracture and smooth feel. The surface has a white (5Y 8/1) glaze with blue transfer printed patterning on one side, whilst the core is coloured white (7.5Y 8/1). Inclusions consist of rare, well-sorted, sub-angular quartz and ferrous particles up to 0.1mm in size. No provenance could be ascertained.

Fabric PM2: Post-Medieval Reduced Ware

A wheel-thrown hard, slightly rough fabric with a hackly fracture and smooth feel. The surface is coloured with a reddish black (2.5YR 2.5/1) glaze, whilst the core is reddish brown (2.5YR 5/3). Inclusions consist of sparse, well-sorted, sub-rounded ferrous and mica particles of 0.1mm in size. Also present are rare, sub-rounded quartz particles of 0.2mm. No provenance could be ascertained.

Fabric PM3: Post-Medieval Oxidised Ware

A wheel-thrown hard, slightly rough fabric with an irregular fracture and smooth feel. The surface is coloured yellowish red (5YR 5/8) with a reddish yellow (5YR 6/8) core, or coloured reddish yellow (5YR 6/8) throughout with traces of a yellowish red (5YR 4/6) glaze. Inclusions consist of sparse, well-sorted, sub-rounded quartz and ferrous and sub-angular mica particles between 0.1-0.3mm in size. No provenance could be ascertained.

6) Summary of the Pottery Fabrics

Although the pottery was counted and weighed, much of the material consists of small featureless bodysherds making identification and the quantification of a reasonable vessel population problematical. Furthermore a fair number of contexts contained pottery dating from the entire Roman period indicating a lack of good stratigraphic information.

As can be seen purely from the fabrics the majority of this assemblage derives from the Roman period (Table 1). There is a small amount of Iron Age, medieval and post-medieval pottery, but these have proved harder to provenance. Moreover, as this material appears in Roman contexts it is likely that some deposits were compromised in antiquity. A more detailed account of the fabrics found in each context and an overall breakdown of fabric groups is given in the appendices (Appendix 1 and 2 respectively).

Table 1. General summary of the pottery found at Slindon.

Period	Quantity	% Qty	Weight (in grams)	% Wgt
Iron Age	15	0.11	53	0.05
Roman	13255	99.81	97163	99.86
Medieval	2	0.02	28	0.03
Post-Medieval	8	0.06	61	0.06
TOTAL	13280		97305	

Of the Roman-period pottery, as one would expect, the coarsewares dominate the assemblage, followed in quantity by the finewares, but there is very little in the way of amphorae or mortaria (Figures 1 and 2).

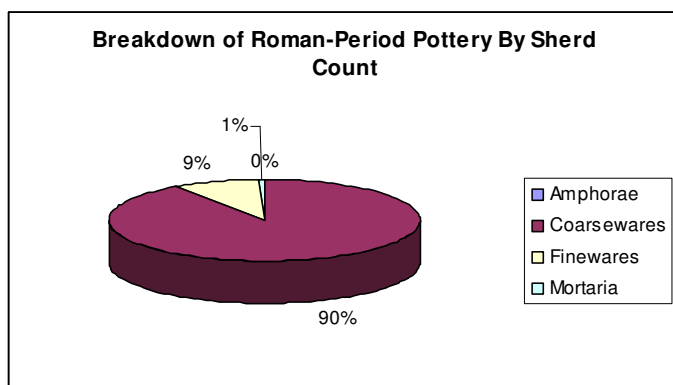

Figure 1. The percentages of Roman-Period pottery classes at Slindon by sherd count.

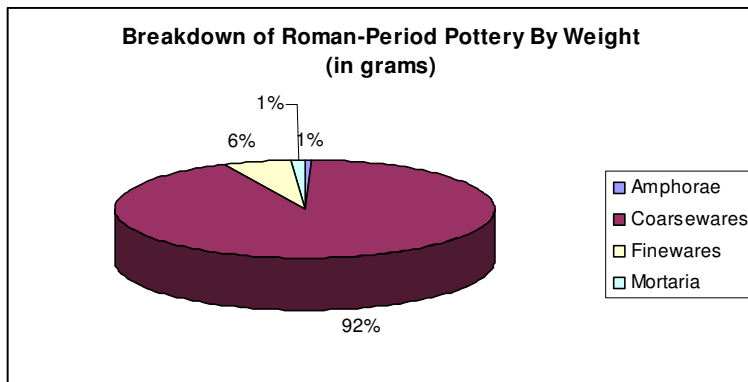

Figure 2. The percentages of Roman-Period pottery classes at Slindon by weight.

Using either the sherd count or weight methods, coarsewares make up 90-92% of the Roman-Period pottery, the finewares contribute 6-9%, whilst mortaria and amphorae combined are in the region of 1-2%. The coarseware assemblage is dominated by products from the Rowlands Castle industry, with Black-Burnished Ware 1 (BB1) the next most abundant (Table 2). Products from the Arun Valley and from the Alice Holt/Farnham/Overwey area are comparatively less common. This characteristic is probably a result of the chronology of the site being linked in with the changing patterns of pottery supply to West Sussex during the Roman period (see below).

Table 2. Breakdown of Roman-Period coarseware fabrics from Slindon (mortaria not included).

Fabric Group	Quantity	% Qty	Weight (grams)	% Wgt
C1A - Rowland's Castle Coarseware 1	850	7.12	4602	5.12
C1B - Rowland's Castle Coarseware 2	7052	59.07	55187	61.39

C9 - Miscellaneous Oxidised Coarsewares	441	3.69	2233	2.48
TOTAL	11939		89902	

The Roman-Period finewares are more variable in terms of there being smaller quantities present, but a wider range of fabrics (Table 3). The fineware assemblage is dominated by products from the Oxfordshire and New Forest industries with samian imports appearing in comparatively smaller quantities. Again this characteristic is probably related to the changing patterns of pottery supply over the lifespan of the site.

Table 3. Breakdown of Roman-Period fineware fabrics from Slindon (mortaria not included).

TOTAL	1228		5534	

The mortaria assemblage is dominated by products from the Oxfordshire industry (Table 4). A number of mortaria sherds from this source appear in the same fabric as Oxfordshire Red/Brown-Slipped fineware. One sherd of Oxfordshire White Ware appears in the fineware category because it cannot be identified as emanating from a

mortarium, although all other examples of Oxfordshire White Ware have been recognised as having done so. The small quantity of amphorae sherds is likely to indicate the presence of not more than 4-5 vessels (Table 5).

Table 4. Breakdown of Roman-Period mortaria fabrics from Slindon.

Of the prehistoric and post-Roman pottery very little can be assessed from the relatively small amount of material recovered. All the flint-tempered sherds of Iron Age date are likely to have emanated from one vessel, but are comparatively small in size to be able to determine a likely date. On the basis of this a Middle-Late Iron Age date has tentatively been assigned. The medieval and post-medieval assemblage is so small that one cannot discount this material arriving on site during manure spreading or other agricultural practices. Consequently as the site has yielded so little pottery dating before or after the Roman period, very little can be inferred on the pre- and post-Roman occupation of the site based on the pottery alone.

Previous work undertaken on Rowland's Castle pottery found at Slindon in 1999 (Nelson 2002) and 2000 (Nelson 2003), divided Rowland's Castle pottery into seven fabric subgroups. A concordance with this work appears in the appendices (Appendix 3).

THE FORMS

Most of the rim sherds from the Roman-period pottery could be classified by using known typologies. The standard samian type-series was used, and published production areas such as Oxfordshire (Young 1977), New Forest (Fulford 1975) and Alice Holt/Farnham (Lyne & Jefferies 1979), have been used to classify material originating from those kiln sites. However, due to the lifespan of the site it was felt that published excavation type-series from sites in the local area with a similar chronological time frame, would make more sense when assessing the coarseware pottery. To this end type-series from Fishbourne (Cunliffe 1971) and Portchester (Cunliffe 1975) have been used to classify pottery not emanating from the above published works.

1) The Illustrated Pottery (Figure 3)

No samian stamps or clearly defined decorated samian was present, but a small number of rim forms could not be paralleled in published works and are described below;

Fig. 3, No. 1

A South-East Dorset Black-Burnished Ware 1 (BB1) shallow bowl or dish with a simple rim and carinated shoulder. It appears in a previously unpublished report on the 1999 excavations as Form 7d (Nelson 2002: p. 29 and Fig. 13.7d). *Unstratified*.

Fig. 3, No. 2

One of five sherds (none of which conjoin) from a small beaker with a squared-off slightly everted rim with wipe marks appearing on the upper body area. The surface feel resembles an Oxfordshire product, but lacks the mica which is distinctive of such wares, and the fabric is more akin to that of New Forest Colour Coated pottery. *Context 25*.

Fig. 3, No. 3

The top of what might well be a ring-necked flagon with a cupped rim in North Gaulish White Ware fabric. The shape broadly fits flagons which date to the early 2nd century AD, although no exact parallel could be found. *Context 43*.

Figure 3. The unusual forms found at Slindon (drawing by Bob Turner).

2) The Amphorae

Amongst the small assemblage of amphorae found at Slindon the majority were featureless sherds. The thickness of some sherds when compared with the fabric is likely to indicate the presence of the Dressel 20 olive oil type from the Guadalquivir Valley in Southern Spain. A small rod handle fragment is likely to have been part of a Dressel 2-4 type from Italy, probably a type transporting wine.

3) The Finewares

The Roman-period fineware forms are set out below (Table 6). In addition to these forms identified by their rims, other forms could be identified by particular characteristics. These included samian forms Curle 11, Drag. 37 and Knorr 78 from La Graufesenque, and forms Curle 11, Drag. 35 and Drag. 44 from Lezoux.

Table 6. The Roman-Period fineware forms from Slindon (rims only).

Fabric	Vessel	EVE	Known Type (Rim Only)
South Gaulish (La Graufesenque) Samian	Bowl	0.35	Drag. 30
	Dish	0.38	Drag. 18, 18/31, 36
	Cup	0.20	Drag. 27, 33

	Bowl	0.39	N/A
	Bottle/Flask	0.52	N/A
	Dish	0.06	N/A

3) The Coarsewares

The Roman-period coarseware forms are set out below (Table 7). As can be seen from the breakdown of the coarsewares there are a number of forms which are unique to specific fabrics in this assemblage. The Alice Holt/Farnham types are subtly different from others which otherwise appear to be of a similar class of vessel. The same can be inferred with the Overwey/Portchester D and Late-Roman Grog-Tempered forms which appear at Portchester. However, it would seem that common types found at Fishbourne which also have been found at Slindon appear to be made by a number of production sites. For instance, the plain dish of Fishbourne type 200 and lids of Fishbourne types 187 and 188 appear to have been produced by potters at Rowland's Castle, in the Arun Valley and by those making Dorset Black-Burnished Ware 1 (BB1), and jar forms of Fishbourne types 161, 166 and 181 appear to have been made at Rowland's Castle and in the Arun Valley, suggesting that the shape of a pot was more significant than its origin.

Table 7. The Roman-Period coarseware forms from Slindon (rims only).

Fabric	Vessel	EVE	Known Type (Rim Only)
Rowland's Castle	Jar	38.8	Fishbourne 161-6, 170, 181, 313-4, 316-9, 323-4, 388-9, 391
	Bowl	2.33	Fishbourne 81, 83, 85-6, 88, 182-3, 209-10, 213, 217, 222, 343
	Dish	3.87	Fishbourne 103, 200, 201, 203, 204, 205, 207
	Lid	2.93	Fishbourne 187, 188, 189
	Flagon/Jug	0.65	Fishbourne 131, 133, 304
Arun Valley	Jar	1.13	Fishbourne 161, 166, 181, 321

	Bowl	1.48	Lyne & Jefferies 5A, 5B, 5C (bowl/strainer)
	Dish	0.05	Lyne & Jefferies 6B
	Flagon/Jug	0.23	Lyne & Jefferies 1B
Overwey/Portchester D	Jar	2.78	Portchester 137
	Lid	0.34	Portchester 173
Black-Burnished Ware (BB1)	Jar	4.01	Fishbourne 328, 329, 330
	Bowl	1.76	Fishbourne 217, 220, 247, 356
	Dish	5.96	Fishbourne 200, 201, 205
	Lid	0.19	Fishbourne 187, 188
Late Roman Grog-Tempered	Jar	0.47	Portchester 123
	Bowl	0.29	Portchester 86, 93
	Dish	0.05	Portchester 107
New Forest (Coarse) Parchment	Jar	0.04	Fulford 98
Miscellaneous Coarsewares	Jar	0.21	Fishbourne 181
	Bowl	0.16	N/A
	Lid	0.04	Fishbourne 188
	Flagon/Jug	0.39	N/A

4) The Mortaria

The Roman-period mortaria forms are set out below (Table 8). Although mortaria appearing in other fabrics are known, no other forms could be identified from what were featureless sherds.

Table 8. The Roman-Period mortarium forms from Slindon.

Fabric	EVE	Known Type
F10A - Oxfordshire Red/Brown-Slipped Ware	0.51	Young C97, C100
F10B - Oxfordshire White Ware	0.45	Young M21, M22
M2 - Wiggonholt White Ware	0.14	Fishbourne 293.2

THE SITE PHASING

Two areas of excavation were undertaken, these being the main area and an area within Keepers Cottage Woods. However, it should be pointed out that many sherds of early date appear abraded. This may well have been due to farming activity throughout the Roman period resulting in early pottery being residual deposits in later features. Tighter dating can therefore only be provided on the contexts listed below. A full list of postulated date ranges for each context is supplied in the appendices (Appendix 1). Taking just the pottery assemblage as a whole the overall date range can be postulated as commencing *c.* AD 60/70 with a terminal date of *c.* AD 370/380.

1) Main Excavation

- Phase 1: Mid-1st to Early 2nd Century AD – Contexts 98, 225
- Phase 2: Early to Late 2nd Century AD – Contexts 43, 61, 78, 82, 96, 108, 112, 125, 129, 132
- Phase 3: Late 2nd to Late 3rd Century AD – Contexts 17, 44, 55, 92, 104, 116, 120, 124, 127, 167, 215, 217
- Phase 4: Late 3rd to Late 4th Century AD – Contexts 7, 8, 18, 23, 126, 140, 142, 143, 147, 158, 159, 166, 181, 183, 185, 187, 192, 193, 194, 196, 197, 198, 202, 204, 208, 210, 211

In addition to the above, Context 25 is made up of a comparatively large quantity of 1st century AD South Gaulish samian mixed in with later material, and therefore may represent a late 3rd century AD feature which has disturbed a 1st century AD deposit.

2) Keepers Cottage Woods

- Phase 1: Mid-1st to Early 2nd Century AD – Context 1114.4
- Phase 2: Early to Late 2nd Century AD – Contexts 1003, 1008, 1009, 1130
- Phase 3: Late 2nd to Late 3rd Century AD – Contexts 1014, 1018, 1022, 1107, 1108, 1109, 1132
- Phase 4: Late 3rd to Late 4th Century AD – Contexts 1007, 1124

THE CHANGING PATTERN OF POTTERY SUPPLY TO SLINDON

The earliest phase of occupation at Slindon Park is characterised by a small amount of samian from La Graufesenque (South Gaul). Only two sherds date to before the Flavian period, but like the rest of the samian at Slindon are abraded and appear in later features; and so a date of *c.* AD 60/70 is postulated for the earliest phase. Curiously very little coarseware dates to this early phase. Bead-rimmed jars of Fishbourne type 166 made at Rowland's Castle and in the Arun Valley appear in very small quantities and again mostly as residual material. A handmade, wheel-finished vessel made in the Arun Valley (Context 225) represents pottery from the transition to the Roman period.

The 2nd century AD sees samian arriving initially from Central Gaul and then later East Gaul. Other imports include a North Gaulish White Ware flagon, and colour-coated beakers in Cologne, Moselkeramik and Central Gaulish fabrics; however the quantity of imports remains comparatively low when compared with the later Romano-British finewares (Figures 4 and 5). Indeed the majority of East Gaulish samian sherds are likely to have come from a single Drag. 31 bowl dating *c.* AD 160-260. A Colchester CAM 391A beaker also arrives around this time. By the end of the 2nd century Rowland's Castle coarseware products have completely surpassed those from the Arun Valley. The dominant form being the everted-rimmed jar of Fishbourne type 313. Black-Burnished Ware (BB1) begins to arrive from Dorset, probably to the Chichester markets by sea.

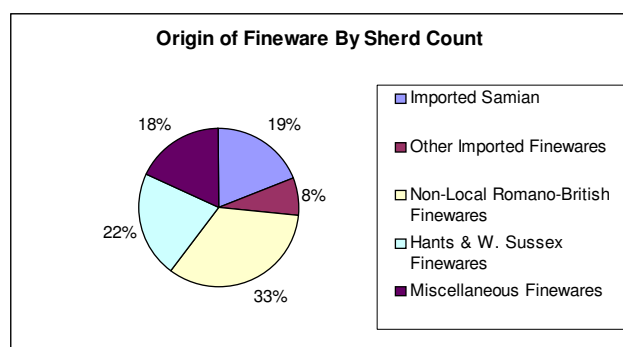

Figure 4. The origins of Roman-Period finewares found at Slindon by sherd count.

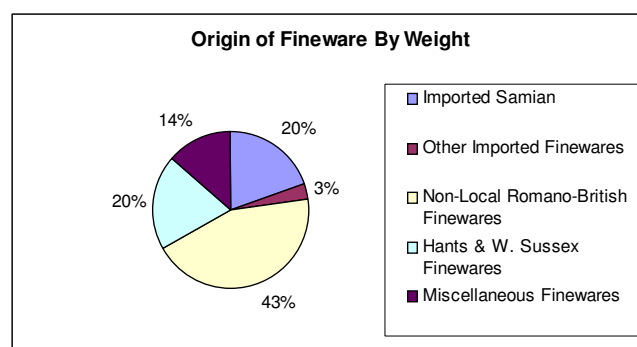

Figure 5. The origins of Roman-Period finewares found at Slindon by weight.

Sometime around the mid-late 3rd century AD there is a dramatic increase in the range and amount of pottery. This is likely to indicate the high point of occupation at the site. No imports are attributable to this period and the fineware assemblage is dominated by Oxfordshire, New Forest and Lower Nene Valley products. It is noticeable that Rowland's Castle coarsewares still dominate followed by BB1, but products from Alice Holt/Farnham also begin to appear (Figures 6 and 7), perhaps via markets in Chichester.

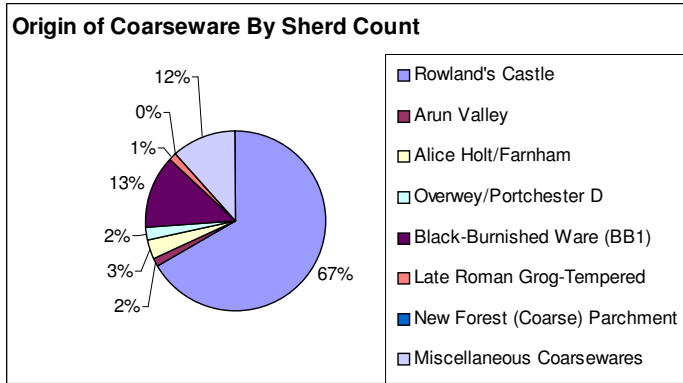

Figure 6. The origins of Roman-Period coarsewares found at Slindon by sherd count.

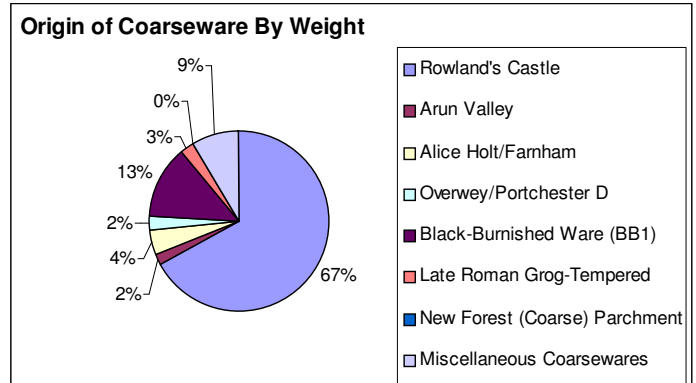

Figure 7. The origins of Roman-Period coarsewares found at Slindon by weight.

The final years of occupation during the 4th century would have already seen the demise of Rowland's Castle coarsewares, these having been surpassed by others from the Hampshire/Surrey area, significantly those in Overwey/Portchester D and Late-Roman grog-tempered fabrics; still showing the importance of Chichester as a market centre.

GKR Hayden BA MA

February 2011

Acknowledgments

The writer would like to extend his thanks to Sue Nelson who undertook the initial assessment of the pottery recovered during the 1999 and 2000 excavations and who provided insightful comments on Rowland's Castle pottery in particular. Thanks are also extended to Bob Turner who undertook the illustrations of the unusual forms, and to Ian Robertson who transported boxes of pottery to and fro for me during this assessment.

Appendix 3 – Concordance With Nelson’s (2002 & 2003) Rowland’s Castle Fabric Groups

Nelson Fabric No.	Fabric No.	Quantity	% Qty	Weight (grams)	% Wgt
ROW RE 1	C1A	766	9.69	4127	6.90
ROW RE 2	C1B	4407	55.77	35695	59.70
ROW RE 3	C1B	1979	25.05	15422	25.79
ROW OX 1	C1A	84	1.06	475	0.80
ROW OX 2	C1B	414	5.24	2217	3.71
ROW OX 3	C1B	63	0.80	468	0.78
ROW BB	C1B	189	2.39	1385	2.32
SUB-TOTAL		7902		59789	
SUB-TOTAL		7902	99.77	59789	99.54
Not Found	C1C	18	0.23	279	0.46
TOTAL		7920		60068	

As part of this report previous unpublished work carried out on material from the Rowland’s Castle industry found at Slindon during the 1999 (Nelson 2002) and 2000 (Nelson 2003) excavations has been re-assessed. In summary Nelson subdivided Rowland’s Castle into seven fabrics. Nelson clearly demonstrates that fabrics classified as ROW RE and ROW OX are basically reduced and oxidised versions of the same fabric, and therefore Rowland’s Castle should not be looked on as producing just grey wares. Nelson also demonstrates that Fabrics 2 (ROW RE 2 and ROW OX 2) and 3 (ROW RE 3 and ROW OX 3) are variations of the same fabric, and that Black-Burnished Ware (ROW BB) copies were also produced in Nelson’s Fabric 2. The concordance set out above shows the following:

- Fabric C1A equates to Nelson’s Fabrics ROW RE 1 and ROW OX 1
- Fabric C1B equates to Nelson’s Fabrics ROW RE 2, ROW RE 3, ROW OX 2, ROW OX 3 and ROW BB
- Fabric C1C was not found during the 1999 and 2000 excavations and therefore did not appear in Nelson’s reports.
